## Baris Kasikci

 $Research\ Assistant$  Ecole Polytechnique Fédérale de Lausanne (EPFL)

EPFL - IC - DSLAB Station 14, Office INN-321 1015 Lausanne, Switzerland +41 (78) 707 19 13 baris.kasikci@epfl.ch http://www.bariskasikci.org

Ankara, Turkey

## RESEARCH INTERESTS

My research is centered around building techniques, tools and environments that will ultimately help us build more reliable and secure software. I am interested in finding solutions that will allow programmers to better reason about their code. In this regard, I strive to find efficient ways to detect bugs, classify them, and diagnose their root cause. I especially focus on bugs that manifest in production, because they are truly hard to deal with. I am also interested in hardware and runtime support for enhancing system security, efficient runtime instrumentation, and program analysis under various memory models.

## **EDUCATION**

# Ecole Polytechnique Fédérale de Lausanne (EPFL) Lausanne, Switzerland Ph.D. in Computer Science Sep. 2010-Nov. 2015 (expected)

Thesis: Techniques for Detection, Root Cause Diagnosis, and Classification of In-Production Concurrency Bugs

Advisor: Prof. George Candea

#### Middle East Technical University (METU)

M.Sc. in Electrical and Electronics Engineering Sep. 2006—Jun. 2009

Thesis: Variability Modeling in Software Product Lines

Graduated with the top grade Advisor: Prof. Semih Bilgen

B.Sc. in Electrical and Electronics Engineering Sep. 2002–Jun. 2006

Project: Embedded Target Estimation, Detection, and Tracking

Graduated with High Honors Advisor: Prof. Arzu Koc

## AWARDS AND HONORS

Intel Software and Services Group, Grant	2014-2016
VMware, Doctoral Fellowship	2014 – 2015
EPFL, Doctoral Fellowship	2010-2011
Scientific and Technological Research Council of Turkey, Master Scholarship	2006-2008
Middle East Technical University, Dean's High Honor List	2006
Middle East Technical University, Undergraduate Final Project Best Team Performance Award	2006
Turkish Customs Association, Scholarship	2002-2006

#### RESEARCH AND WORK EXPERIENCE

## Ecole Polytechnique Fédérale de Lausanne

Lausanne, Switzerland

Research Assistant

Sep. 2010–Nov. 2015 (expected)

Research on software reliability with an emphasis on concurrent software

- **Gist** is the first technique for accurately and automatically diagnosing the root causes of failures without custom hardware or runtime checkpointing support.
- RaceMob is the first automated in-production data race detection technique that works always-on and provides high accuracy.
- **Portend** is a high-accuracy technique to classify data races according to their potential consequences under arbitrary memory models.
- Bias-Free Sampling is a technique which allows efficiently sampling rarely-executed code—where bugs often lurk—, without over-sampling frequently-executed code.

Intel Santa Clara, CA, USA

Research Intern

Jul. 2015–Sep. 2015

Failure root cause diagnosis and security enhancements using hardware support

- I designed and implemented a gdb extension that allows developers to determine which program statements operate on a given data type at runtime. Using this extension reduces the number of statements to examine while debugging by an order of magnitude.
- I began investigating hardware support for enhancing system security. In particular, I have been looked into efficient path profiling for auditing and thwarting control flow hijack attacks.

VMware Palo Alto, CA, USA

Research and Development Intern

Jun. 2014-Sep. 2014

Automated debugging and runtime control flow tracking

- I designed and implemented an infrastructure to remotely debug and profile VMware VCenter virtual machine management software, while it is running in production.
- I implemented a runtime for efficient control flow tracking in software. This work formed the basis of my **Gist** work on root cause diagnosis.

Microsoft Research Redmond, WA, USA

Research Intern Jun. 2013–Sep. 2013

Efficient runtime execution sampling technique and low overhead coverage measurement

- I worked on the design of the **Bias-Free Sampling** framework for efficient runtime sampling. I designed and implemented the bias-free sampling framework for managed code (i.e., C#). This tool is internally maintained and used at Microsoft.
- I designed and implemented a fault injection tool to detect resource leakage problems.

## Siemens Corporate Technology

Istanbul, Turkey

Senior Software Engineer

Mar. 2008-May 2010

Embedded home and industrial automation software

• I designed and implemented a real-time embedded gateway software between Siemens communication processors and a building automation system.

#### Aselsan Electronic Industries

Ankara, Turkey

Software Engineer

May 2006-Mar. 2008

Embedded motor control and functional testing infrastructure

• I was responsible for a real time embedded control software for turret motor control. I also designed and implemented a full-system functional testing software.

Student Intern Jun. 2005–Jul. 2005

Embedded software development

• I developed an embedded control software for a night vision camera on a PIC microcontroller.

## PEER-REVIEWED PUBLICATIONS

- [1] Failure Sketching: A Technique for Automated Root Cause Diagnosis of In-Production Failures. Baris Kasikci, Benjamin Schubert, Cristiano Pereira, Gilles Pokam, and George Candea. Symp. on Operating Systems Principles (SOSP), Monterey, CA, October 2015.
- [2] Failure Sketches: A Better Way to Debug. Baris Kasikci, Benjamin Schubert, Cristiano Pereira, Gilles Pokam, Madan Musuvathi, and George Candea. Workshop on Hot Topics in Operating Systems (HotOS), Kartause Ittingen, Switzerland, May 2015.
- [3] Automated Classification of Data Races Under Both Strong and Weak Memory Models. Baris Kasikci, Cristian Zamfir, and George Candea. *ACM Transactions on Programming Languages and Systems* (TOPLAS), May 2015.
- [4] Efficient Tracing of Cold Code Via Bias-Free Sampling. Baris Kasikci, Thomas Ball, George Candea, John Erickson, and Madanlal Musuvathi. *USENIX Annual Technical Conf. (USENIX ATC)*, Philadelphia, PA, June 2014.
- [5] Lockout: Efficient Testing for Deadlock Bugs. Ali Kheradmand, Baris Kasikci, and George Candea. 5th Workshop on Determinism and Correctness in Parallel Programming (WoDet), Salt Lake City, UT, March 2014.
- [6] RaceMob: Crowdsourced Data Race Detection. Baris Kasikci, Cristian Zamfir, and George Candea. Symp. on Operating Systems Principles (SOSP), Farmington, PA, November 2013.

## Talks

TALKS	
Automated Root Cause Diagnosis of In-Production Failures	
• Symposium on Operating System Principles (SOSP)	Oct. 201
• Intel Corporation	Sep. 201
• Google	Sep. 201
• VMware	Sep. 201
Failure Sketches: A Better Way to Debug	
• EcoCloud Annual Event	Jun. 201
• Hot Topics in Operating Systems (HotOS)	May 201
Efficient Tracing of Cold Code via Bias-Free Sampling	
• USENIX Annual Technical Conference (USENIX ATC)	Jun. 201
Lockout: Efficient Testing for Deadlock Bugs	
• Workshop on Determinism and Correctness in Parallel Programming (WoDet)	Mar. 201
RaceMob: Crowdsourced Data Race Detection.	
• Symposium on Operating System Principles (SOSP)	Oct 2013
• EPFL Systems seminar	Oct. 201
CoRD: A Collaborative Framework for Distributed Data Race Detection	
• Workshop on Hot Topics in System Dependability (HotDep)	Oct. 201
Data Races vs. Data Race Bugs: Telling the Difference with Portend	
• International Conference on Architectural Support for Programming Languages and Operating Systems (ASPLOS)	Mar. 2012
How to Build Reliable Software?	
• Seminar talk to the incoming undergraduate students at EPFL	Sep. 201
Professional Service	
Reviewer	
Transactions on Software Engineering Transactions on Software Engineering and Methodology	$\frac{201}{201}$
PC Member	201
International Symposium on Software Testing and Analysis, Artifact Evaluation Committee	201
Shadow PC Member	
EuroSys - EuroSys Conference on Computer Systems	2013, 201
External Reviewer	
CIDR – Conference on Innovative Data Systems Research	201
DSN – Intl. Conf. on Dependable Systems and Networks	2011, 201
EuroSys – EuroSys Conference on Computer Systems HotOS – Workshop on Hot Topics in Operating Systems	2011, 201 2011, 201
USENIX Annual Technical Conference	2011, 201
SOCC – Symposium on Cloud Computing	201
SOSP – Symp. on Operating Systems Principles	2011. 201
SPIN – Intl. SPIN Workshop on Model Checking of Software	201

## TEACHING ASSISTANTSHIP

Principles of Computer Systems (graduate level)	2014
Software Engineering (3 <sup>rd</sup> year undergraduate level)	2011, 2012, 2013
Informatics II (1 <sup>st</sup> year undergraduate level)	2010

## RESEARCH MENTORING

Lisa Zhou (1<sup>st</sup> year master)

Sep. 2015-

• Lisa and I are working on using hardware support for improving the security of software systems. In that regard, Lisa and Benjamin (see below) are building a framework for reproducing security bugs in large applications (e.g., Chrome).

Benjamin Schubert (3<sup>rd</sup> year undergraduate)

Feb. 2015-

• Benjamin and I have been working on a framework that allows reliably reproducing failures in systems software like Apache and MySQL. We used this framework to evaluate my **Gist** work on root cause diagnosis. We are now extending this framework to encompass security vulnerabilities.

Ali Kheradmand (3<sup>rd</sup> year undergraduate)

Jul. 2013-Sep.2013

• Ali and I worked on the **Lockout** project and developed a technique to systematically perturb program executions (without modifying program semantics) to increase the probability of deadlock manifestation. Ali is currently pursuing his Ph.D. in UIUC.

Radu Coman (Master's thesis)

Jan. 2012-Sep. 2012

• Radu and I surveyed common concurrency bug patterns in open source software. After we identified data races as a common bug pattern among the 100 bugs we looked at in Google Code, we built a static data race detector. Radu is currently a senior software engineer at Ixia.
